## Continuous development for greater capacity, accuracy, control and safety

Manual treatment machine

Continuous operation machine

Rotostat batch machine

Thermoseed Technology

Dynavia: A new concept

The first treatment machine. Used on the farm with a barrel or a concrete mixer. Treatment is not uniform, and the yield is low

Treatment machine of the rotating screen type. Suitable for cereals. Its size and equipment result in good treatment capacity, but accuracy is low, and cleaning is difficult.

Machine suitable for all species (cereals, corn, rapeseed, sunflower). Can treat small and large volumes, uniformly and accurately. Simple to calibrate and doses applied can be controlled. Enables the disinfection of the seed against certain diseases by steam water disinfection under the fluidizer bed . this complex technology does not use any chemical and is suitable for situations and crops that need this type of protection This batch machine in equipped with a large mixer and is suitable for field crop seeds. It enables accurate management of all the application parameters (seed, pumps, products, powders) and is designed to avoid all contact between the operator and the products. It uses highly advanced technologies applied in other industrial sectors such as pharmaceuticals and food
